Professional Summary

Salesforce Developer with 4+ years of experience supporting global CRM platforms used by 5,000+ users. Improved performance in enterprise Salesforce environments using Apex and LWC. Migrated legacy Visualforce pages to LWC and increased page load speed by 2.3 times. Built Flows and Platform Event based solutions that reduced manual case handling. Developed Salesforce AI projects with Agentforce, Data Cloud, and Einstein Trust Layer, including an autonomous support agent that reached a 63.9% auto resolution rate. Currently pursuing an MS in Computer Science at Indiana University Bloomington, graduating in May 2026, and open to relocate across the U.S.

Technical Skills

Certifications: Agentforce Specialist, Platform Developer, Platform Administrator, Platform App Builder.

AI and Data Cloud: Agentforce, Prompt Builder, Einstein Trust Layer, Generative AI, Retrieval Augmented Generation (RAG), Data Cloud.

Salesforce Development: Apex, Lightning Web Components (LWC), Triggers, Test Classes, Aura Components, Visualforce, Apex Batch, Apex Scheduler.

Integrations and APIs: REST APIs, SOAP APIs, Named Credentials, OAuth, External Services, Salesforce Connect.

Automation and Platform: Flows, Platform Events, Validation Rules, Process Builder, Approval Processes.

DevOps and Tools: Salesforce DX, Gearset, Git, Jenkins, CI/CD Pipelines, Deployment Automation.

Data and Security: SOQL, SOSL, Data Loader, ETL, Permission Sets, Sharing Rules, Role Hierarchy, Field-Level Security.

Experience

Software Developer Intern - MyEdMaster

Jun. 2025 - Aug. 2025

- Worked on a Python based AI content pipeline using MySQL, Redis, GraphRAG. Integrated AutoGen agents into the content review workflow. Reduced manual content evaluation time by 23%.
- Improved retrieval workflow for a proprietary LLM using LlamaIndex and SpaCy based on educator review feedback. Supported generation of 2,800 plus topic specific assessment items. Improved content relevancy from 72% to 83% using educator review metrics.
- Deployed a Flask backend on AWS EC2 using Docker and Apache. Worked with the backend team to troubleshoot 4 recurring deployment issues through root cause analysis. Improved model evaluation speed by 18%.

Senior Salesforce Developer - Cognizant

Sep. 2022 - Apr. 2024

- Fixed performance bottlenecks for a global CRM supporting 5,000+ users by tuning key Apex and LWC components, resulting in a 27.8% speed improvement and a 19.6% reduction in SLA breaches.
- Modernized the user experience by migrating 22 legacy Visualforce pages to LWC, which improved page load speeds by 2.3 times and cut technical debt by 41.3%.
- Built case handling solutions using Flows and Platform Events to reduce manual effort by 33.7% while maintaining a consistent 92.4% Apex test coverage.
- Noticed recurring issues during Salesforce releases and worked with QA and deployment teams to fix them using Gearset, Git, and Salesforce DX. Reduced release related issues by 21.4% and made rollouts more stable across environments.

Salesforce Developer - Cognizant

Jan. 2021 - Sep. 2022

- Built custom CRM workflows for 3,180 users using a mix of Apex, LWC, and Aura. These updates helped speed up process efficiency by 26.7%.
- Integrated Salesforce with payment gateways, ERP, and marketing platforms through REST APIs, reducing reconciliation time from an average of 3.1 hours to 2.6 hours.
- Found and fixed delays in CRM updates by moving the work into batch and scheduled Apex jobs. This change reduced manual follow up by 17.8% and improved the reliability of scheduled data updates.
- Automated routine operations using Flows, Process Builder, and Validation Rules. Manual data errors fell by 18.9% while SLA compliance rose by 14.2%.

Projects

AI-Driven Case Triage & Resolution System | Agentforce, Apex, LWC, Flows, Data Cloud, Einstein Trust Layer, REST APIs

- Built an Agentforce system to classify cases by intent and urgency, which helped reduce the manual sorting bottleneck. Added the Einstein Trust Layer to mask sensitive data and keep routing decisions within secure permission boundaries.
- Connected Data Cloud and customer context through REST APIs, then surfaced recommendations in a custom LWC. Cut average handling time by 24.6% and improved consistency across repetitive cases.

Customer Support Autonomous Agent | Agentforce, Prompt Builder, Data Cloud, Einstein Trust Layer, RAG, REST APIs

- Built an autonomous support agent to handle routine customer requests before agent escalation. Used Agentforce and Prompt Builder with customer context, policy data, and retrieval based responses.
- Grounded the agent in Data Cloud and connected knowledge sources, with Einstein Trust Layer controls to keep responses within secure boundaries. Achieved a 63.9% auto resolution rate and reduced first response time by 17.2%.

Intelligent Knowledge Retrieval Bot | Agentforce, Generative AI, RAG, NLP

- Built a knowledge retrieval bot to reduce the time support users spent searching across scattered articles and internal content. Used NLP and RAG to pull the most relevant context before generating a response inside Salesforce.
- Focused on keeping responses grounded in retrieved content instead of generic AI output. Delivered context aware answers with 96% accuracy.

Education

MS in Computer Science - Indiana University Bloomington

Aug. 2024 - May. 2026
